

Fundamentals of Exchange Traded Funds

Exchange Traded Funds (ETFs) offer an approach to investing that combines instant diversification with trading flexibility and reduced expenses.

WHAT ARE ETFs?

An ETF is a collection of securities that tracks, and is intended to represent, the performance of a broad or specific segment of the market (e.g. global market equities, small-, mid-, large-cap stocks, emerging markets, etc).

An ETF is similar to an index mutual fund, or unit trust, but trades like a stock throughout the day. ETFs combine the features of index mutual funds with individual securities:

- Like index mutual funds, ETFs allow investors to track more

than hundreds of domestic and international indexes, including the the Straits Times index and S&P 500®, as well as specific sectors or industries (e.g. utilities, technology, healthcare or gold).

- Like individual stocks, ETFs give investors the flexibility to buy and sell on the major stock exchanges throughout the day, at the market price. Like stocks, investors can place stop loss and limit orders on ETFs. They can even be bought on margin and sold short, subject to your broker's terms and conditions.

GLOBAL ETF GROWTH OVER LAST 19 YEARS

COMPARING ETFs TO INDIVIDUAL STOCKS AND MUTUAL FUNDS

	TRADE THROUGHOUT THE DAY	FLEXIBLE TRADING OPTIONS	TRACK AN INDEX	PRICING	MINIMUM INVESTMENT
ETFs	■	■	■	Market Price	No minimum required
Index Mutual Funds	—	—	—	Value (NAV)	Minimums
Individual Stocks	■	■	—	Market Price	No minimum required

Unlike a stock, Index ETFs and mutual funds are managed funds that follow a passive investment strategy, attempting to track the performance of an unmanaged index of securities. As a result, the Funds may hold constituent securities of the Index regardless of the current or projected performance of a specific security.

ETFs trade like a stock and will fluctuate in market value over the course of the trading day, unlike an index mutual fund. ETFs may trade at prices below or above the ETF net asset value. Buying shares of an Index ETF, similar to buying a stock, will typically involve brokerage commissions to which index mutual funds may not be subject. Frequent trading of ETFs could significantly increase commissions and other costs.

THE POTENTIAL BENEFITS OF EXCHANGE TRADED FUNDS

DIVERSIFICATION. ETFs offer one of the easiest ways to diversify a portfolio, especially for investors who want to focus on a specific sector or industry. By virtue of being index investments, ETFs offer exposure to a particular market segment, helping to protect against the risk of a select number of individual stocks hurting an investor's overall portfolio performance. It's important to remember that diversification does not ensure a profit or guarantee against loss.

LOWER FEES AND EXPENSES. Because ETFs are passively managed, they typically have low management fees and operating expenses.

TRADING FLEXIBILITY. ETFs trade all day long, so investors can lock in the market value of the ETF anytime during the trading day. Because ETFs trade like stocks on an exchange, a wider range of techniques (short selling, stop loss and limit orders) can be used to take advantage of anticipated market movements. It's important to keep in mind that frequent ETF trading, which typically occurs through a broker, can significantly increase brokerage commissions potentially washing away any savings from low fees or costs.

TRANSPARENCY. Investors have all the information they need to make informed investments—no strategy drift or black boxes to decipher. With ETFs, you know precisely which securities the ETF holds and what you're invested in—there is no need to wait for the end of the quarter to review the fund's holdings.

DEFINITIONS

FLEXIBLE TRADING OPTIONS

Ease and efficiency with which one can purchase a security. ETFs, like stocks, trade on an exchange and can be bought and sold at any point during trading hours at their current market value. Buy and sell orders for mutual fund shares are placed and transacted after the market close at the mutual fund's closing market value, where the closing value is calculated at the end of the trading day.

INDEX DEFINITIONS

STRAITS TIME INDEX

The Straits Times Index (STI) is a capitalization-weighted stock market index that is regarded as the benchmark index for the Singapore stock market. It tracks the performance of the top 30 companies listed on the Singapore Exchange. It is jointly calculated by Singapore Press Holdings (SPH), Singapore Exchange (SGX) and FTSE Group (FTSE).

S&P 500 INDEX

The S&P 500 Index is an unmanaged index of 500 common stocks that is generally considered representative of the US stock market. The index is heavily weighted towards stocks with large market capitalizations and represents approximately two-thirds of the total market value of all domestic common stocks. The S&P 500 Index figures do not reflect any fees, expenses or taxes.

This document is prepared by State Street Global Advisors Asia Limited and has not been reviewed by the Securities and Futures Commission. This document and the information contained herein may not be distributed and published in jurisdictions in which such distribution and publication is not permitted. Investment involves risk. The value of funds may fall or rise and past performances of the funds are not indicative of future performances. Distributions from the funds may be contingent on dividends paid on underlying investments of the funds and are not guaranteed. Listing of the funds on relevant stock exchanges does not guarantee a liquid market for the units and the funds may be delisted. Investors should read the relevant funds' prospectuses for further details including the risk factors.

ETFs trade like stocks, are subject to investment risk, fluctuate in market value and may trade at prices above or below the ETFs net asset value. Brokerage commissions and ETF expenses will reduce returns. Frequent trading of ETFs could significantly increase commissions and other costs such that they may offset any savings from low fees or costs. Diversification does not ensure a profit or guarantee against loss. Asset Allocation may be used in an effort to manage risk and enhance returns. It does not, however, guarantee a profit or protect against loss.

The SPDR® Straits Times Index ETF (the "Fund") is not in any way sponsored, endorsed, sold or promoted by SPH Data Services Pte Ltd or Singapore Press Holdings Ltd (collectively "SPH") or FTSE International Limited ("FTSE"). SPH and FTSE bear no liability in connection with the administration, marketing or trading of the Fund. No warranties, representations or guarantees of any kind are made in relation to the Straits Times Index ("STI") or the Fund by FTSE or SPH. All intellectual property rights in the STI vest in SPH.

"S&P" and "ASX", as used in the terms S&P/ASX 50, S&P/ASX 200, S&P/ASX 200 Listed Property, S&P/ASX 200 Resources, S&P/ASX 200 Financials ex A-REIT and S&P/ASX Small Ordinaries, are trademarks of the Australian Securities Exchange ("ASX") and Standard & Poor's Financial Services LLC ("S&P") respectively, and has been licensed for use by State Street Global Advisors Australia Limited. SPDR products are not sponsored, endorsed, sold or promoted by S&P or ASX, and neither S&P nor ASX make any representation regarding the advisability of investing in SPDR products. You should consider the Product Disclosure Statement in deciding whether to acquire, or to continue to hold such products.

In general, ETFs can be expected to move up or down in value with the value of the applicable index. Although ETFs may be bought and sold on the exchange through any brokerage account, ETFs are not individually redeemable from the fund. Investors may acquire ETFs and tender them for redemption through the fund in creation unit aggregations only, please see the prospectus for more details.
